

Hackathon Use Case Brief

1. Goals and Motivation

Challenge Name: Manager Compass

Core System / Intelligence Layer Name: Manager-facing HR guidance, people insights, and action toolkit for manager questions, team signals, and next steps

Business Unit / Product Name: Human Resources / Manager Compass manager enablement toolkit for people leaders across RealPage

Domain: Manager enablement, people analytics, employee engagement, recruiting, compensation, retention, performance, HR process navigation, and VCP alignment

Problem Statement

Describe the core problem:

Managers play a major role in employee engagement, retention, team performance, and the overall RealPage experience. Manager Compass brings approved HR guidance, defined people measures, and practical manager actions into one place so people leaders can move from a question to a confident next step.

Key Opportunity Areas:

- HR resources, dashboards, SharePoint sites, email, and process documents provide a rich foundation for a connected manager experience.
- Existing HR and Power BI data provides a strong foundation for organization, hiring, headcount, and attrition insights that can support manager action.
- Manager Compass gives leaders a consistent way to notice org structure, open roles, engagement, retention, and team-health signals.
- Power BI and HR data provide a strong foundation for people snapshots, structured questions, and leadership-ready updates.
- Managers receive concise answers grounded in approved HR resources, with clear links, checklists, and escalation points.
- The solution uses a privacy-conscious design focused on approved, non-sensitive people insights and human-reviewed manager action.

VCP Alignment

Transform - Elevate Employee Engagement: Turn engagement feedback into listening-session prompts, follow-up commitments, stay conversations, development discussions, and team action plans.

Transform - Unlock Internal AI: Make internal AI practical in everyday manager work by reducing friction, answering common questions, summarizing approved guidance, and pointing to the right next step.

Transform - Deploy a One RealPage Customer Engagement Model: Create a more consistent manager experience that strengthens the employee experience and helps teams serve customers with a more consistent RealPage operating model.

Protect - Enhance Voice of Customer & Feedback Loops: Connect employee feedback, engagement themes, turnover signals, and customer-impacting team issues into clearer action plans and feedback loops.

Reference Workflow Diagram

Manager asks a people or HR process question or selects an organization view -> approved HR resources, Power BI or file-based people data, and defined Measure What Matters metrics -> Manager Compass interprets the request and returns guidance, a people snapshot, checklist, or leadership-ready update -> clear escalation point -> manager or HRBP review and action -> adoption and outcome feedback

Scope boundary: Manager Compass focuses on approved HR content and non-sensitive organization-level or aggregated people data, including hierarchy, headcount, open roles, geography, attrition, and defined measures. It preserves human judgment for compensation, performance, legal, payroll, employee-relations, and employment decisions and keeps private or sensitive individual data outside the manager experience.

2. Hero Features - What You Could Build

Choose one focused direction and define the smallest useful prototype.

Feature	Description
Manager guidance hub	Give managers one place for concise, approved answers across recruiting, compensation and merit, engagement, performance, policy, payroll or benefits routing, turnover, and team health.
Engagement action planning	Turn down engagement scores or employee feedback into listening-session prompts, follow-up commitments, a "you said / we did" plan, and an HR escalation point.

Feature	Description
Stay conversation and retention support	Provide stay-conversation questions, retention discussion guidance, and signals for when to involve HR without making a retention or employment decision.
New manager onboarding	Guide a new people leader through a 30/60/90-day checklist of systems, responsibilities, cadences, HR contacts, and key manager behaviors.
Recruiting and process navigation	Explain how to open a requisition, prepare for interviews, clarify manager versus recruiter responsibilities, and route payroll, benefits, policy, and employee-relations questions.
Compensation, performance, and career conversations	Support merit-planning preparation, development discussions, goal setting, documentation reminders, and career conversations without making pay or performance decisions.
People snapshot and signal support	Summarize approved org hierarchy, headcount movement, open roles, geography, attrition, and defined team-health signals so managers can ask structured questions.
Leadership-ready people update	Create an evidence-linked, baseball-card-style view that helps leaders explain people impacts, risks, actions, and follow-up in operating reviews.

Expected Hackathon Demo

Demonstrate a simple manager-facing AI assistant that answers common questions with concise, approved guidance, links, checklists, and escalation points. Example prompts include engagement scores, merit planning, retention risk, opening a requisition, and a new manager's first 90 days.

3. Hints and Resources

Data Sources

Data	Description
Approved HR resources and SharePoint guidance	Canonical recruiting, compensation, engagement, performance, policy, benefits, payroll, and employee-relations guidance that grounds answers, links, and escalation points.

Data	Description
Power BI HR people data	Organization-level and aggregated data such as hierarchy, headcount movement, open requisitions, hiring, geography, role level, and attrition that supports people snapshots and structured questions.
Measure What Matters definitions	Existing definitions and counting rules for open requisitions, attrition, headcount, and related people measures; use as the shared metric baseline.
Org Insights and manager dashboards	Existing views for org layers, spans of control, functional leaders, direct reports, and organization design principles; align to existing work rather than duplicate it.
Existing manager artifacts and VCP guidance	Manager-built playbooks, "what good looks like" principles, baseball-card examples, and VCP expectations that inform a reusable manager experience.

Related work already underway

RealPage has HR and Power BI work underway through Measure What Matters, the HR people dashboard, and Org Insights. Manager Compass brings these defined measures and management practices together in a manager-facing operating layer. The available views provide organization hierarchy, headcount movement, open roles, geography, attrition, org layers, spans of control, and leadership context that teams can use to build a clear people story.

AI & Cloud Tools (Optional but Encouraged)

Tool	Purpose
Approved AI assistant	Help managers interpret approved data, ask structured questions, summarize HR guidance, and create a playbook or leadership-ready summary.
Approved HR resource library	Ground manager answers in approved SharePoint and HR guidance while preserving source links, ownership, and permissions.
Power BI people-data workspace	Provide the people-data foundation for organization snapshots, structured questions, and leadership-ready updates.
Structured people-data input	Connect defined people measures and organization context to the manager experience through the approved data path.
Manager playbook, dashboard, or presentation tool	Give teams a common what-good-looks-like framework and a way to display the people snapshot, explain signals, present the action story, and capture adoption.

4. Evaluation Criteria

Criterion	What Success Looks Like
Learning Capability Approach	Teams can combine approved HR guidance with supplied people data, answer common manager prompts, explain their analysis, show where human judgment enters, and present a clear people story to leadership.
Compliance & Safety Approach	The prototype uses approved HR content and non-sensitive organization-level or aggregated data with privacy-conscious design and human review for compensation, performance, legal, payroll, employee-relations, and employment decisions.
Accuracy & Consistency Approach	Metrics match Measure What Matters definitions, source fields and links are traceable, refresh status is visible, HR process guidance is current, and escalation points are clear.
Automation & Scalability Approach	A reusable manager template or playbook can be applied across managers or business units, with a clear separation between data refresh and AI-supported interpretation and a practical adoption measure.
Enterprise Readiness Considerations	The working model includes Shane and HR ownership, approved people data and HR resources, source-linked guidance, privacy protections, a reusable manager experience, and an observable adoption measure.

5. Why It Matters

Business Impact Summary: Manager Compass is designed to give RealPage a practical way to turn approved HR guidance and existing people data into manager action. It can strengthen engagement follow-through, improve retention and team-health conversations, reduce repetitive HR questions, support more consistent manager and employee experiences, and make internal AI useful in everyday leadership work. It also creates a clearer connection between employee feedback, team conditions, customer impact, and operating-review decisions. The result is a practical manager enablement experience that can scale across RealPage and support leadership operating reviews.
